1.4 pages per
visit

PAGES VIEWED

492

across the
whole site

AVG. TIME ON SITE

15 sec

per visit

Reading these numbers. The visitor count is roughly 3× March's. Most of that growth is automated traffic — vulnerability scanners and crawlers probing the site root and login URLs from cloud data centres. The genuine human signal is concentrated in the UAE row of the countries section below (74 visitors, 56% engagement) and in the time spent on the business pages. The bot dilution is also why the average time-on-site looks low (bots leave immediately). Where it matters — Charles's audience — engagement is healthy.

Visitors day by day

Daily unique visitors across the two-month period.

Most visited pages

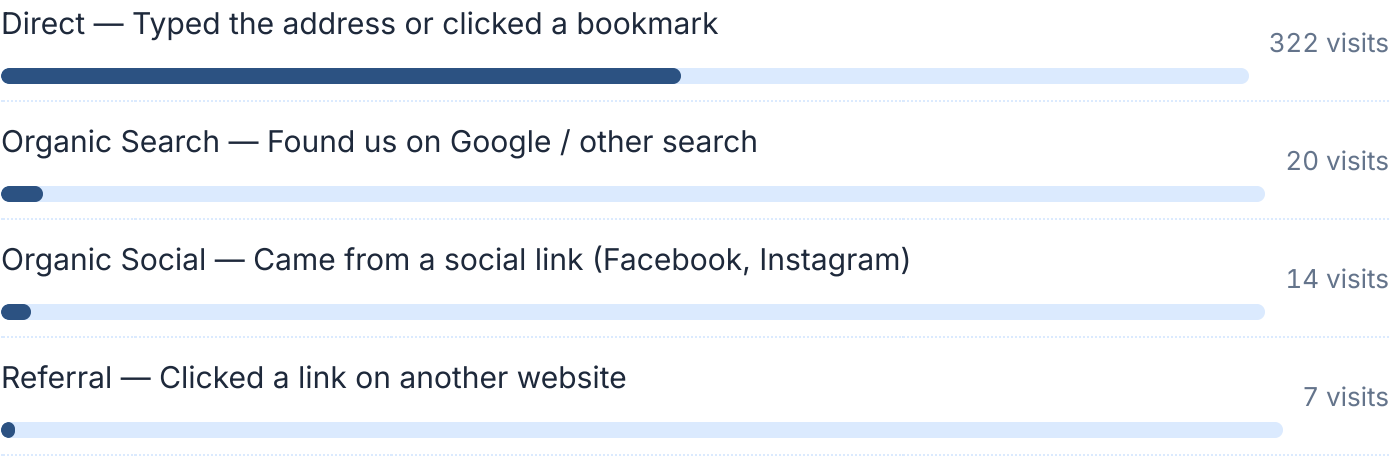

Which pages people looked at. Longer bars = more views.

Home — Intentional Group	332 views
The Intentional Inclusion Celebration — Intentional Group	73 views
Intentional Development — Intentional Group	19 views
Intentional Interiors — Intentional Group	19 views
Intentional Education — Intentional Group	17 views
Intentional Landscaping — Intentional Group	14 views
Page not found — 8 different URLs	18 views

About the "Page not found" entries. The 18 views (3% of the period's pageviews) against missing pages all come from automated bots and vulnerability scanners — typically probing for abandoned phishing kits (fake Netflix / Facebook login pages) or generic login URLs. No real page on the site links to any of these URLs, so **nothing is broken**. The noise is visible here only because Google Analytics counts every request.

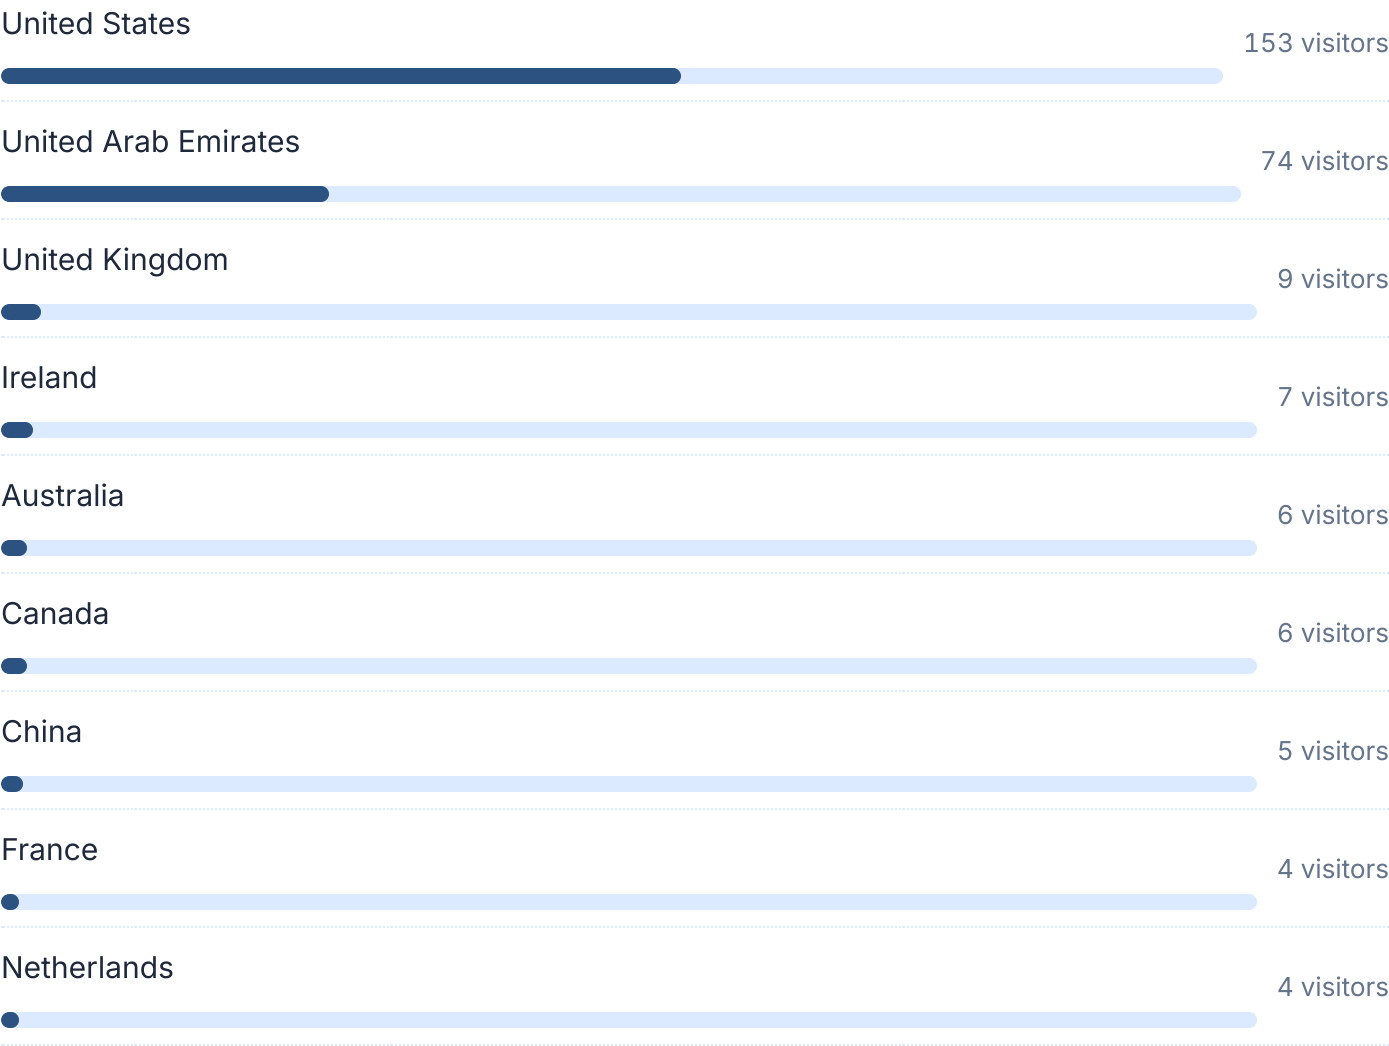

How visitors found the site

The route visitors took to reach intentional.ae.

Where visitors came from

Top countries by number of visitors.

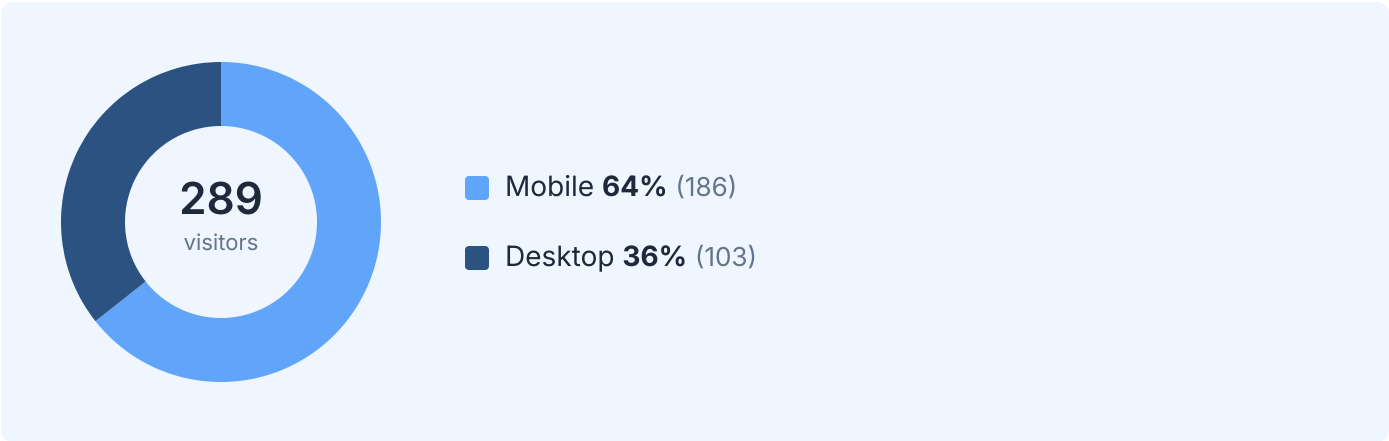

About the United States row. Most of the US visitor count is automated traffic — scanners and crawlers running from US-based cloud data centres (Cheyenne, Ashburn, etc.). The engagement rate on the US row is around 2%, versus 56% for the UAE row, which is what you'd expect for genuine human visitors.

What they used

The device type visitors browsed on.

Maintenance performed this month

Behind-the-scenes work carried out on the site during this period.

Software updated			
component	from	to	notes
Site software (Astro)	6.1	→ 6.3	a maintenance update to the platform your site is built on, carrying security patches

Security advisories resolved

Known vulnerabilities that were patched by the update above.

SERIOUS

Fixed a flaw in a supporting library that could let a specially-crafted request overload and crash a site feature

MINOR

Fixed a small flaw in how protected interactive sections handle encrypted values

Verification

Checks confirming the site is healthy after the work.

- ✓ The site was rebuilt from scratch — all 7 pages generated without any errors.
- ✓ The site was scanned for known security problems after the update — 0 issues remain (both advisories above have been fixed).
- ✓ The live site at intentional.ae was confirmed reachable over a secure (HTTPS) connection.
